

### About ScaffCycle

**ScaffCycle** is the UK's dedicated digital marketplace for second-hand scaffolding — built to help the industry work smarter, reduce waste, and unlock value from unused stock.

Launched in 2025 as part of **Worldwide Scaffold and Access Ltd (WWSA)**, ScaffCycle was created to solve a simple but widespread challenge: thousands of tonnes of perfectly usable scaffolding are left idle in yards or scrapped each year, despite being fit for reuse. By connecting sellers with buyers through a single, trusted platform, ScaffCycle keeps good materials in circulation and supports the industry's shift toward a more sustainable, circular economy.

### What We Do

ScaffCycle makes it simple to:

- **List surplus kit** in minutes, whether a single item or bulk stock via spreadsheet upload
- **Browse available scaffolding** nationwide and make offers securely
- **Access trusted partners** for transport and finance to get deals over the line faster
- **Improve sustainability performance** by reducing waste and embodied carbon

### Why It Matters

Reusing scaffolding doesn't just make commercial sense — it's good for the planet. Research shows that reusing materials can cut carbon emissions by up to 85% compared with buying new. ScaffCycle offers companies a practical way to:

- Free up valuable yard space
- Improve cash flow by turning idle stock into working capital
- Meet environmental and ESG commitments

### Who We Are

ScaffCycle was founded by **Tony and Karen Stevens** of WWSA, drawing on over 50 years of scaffolding industry experience and a trusted global network. With first-hand knowledge of both international supply and complex resale projects, they recognised the need for a dedicated UK platform to make trading easier, faster, and more transparent.

### Our Vision

We believe scaffolding isn't single-use. By giving equipment a second life, ScaffCycle supports a stronger, more sustainable scaffolding industry — one where businesses of all sizes benefit from efficiency, innovation, and responsible resource use.
